

Grafted Tomato Field Day

Date: June, 2014

Time: 9:00 – 12:00pm

Registration: \$10

Location: SFU/ Goldsboro, NC

The goal of this field day is to invite participants from the winter Tomato Grafting Workshop and anyone else interested out to the CEFS Small Farm Unit to see how the grafted seedlings performed in the field. An experimental plot has been planted looking at various different (and commercially available) rootstock/ scion combinations. Participants will tour both the field and high tunnel tomato plots, learn basic plant management, and rate the different varieties for weed, insect and disease pressure.

The workshop will conclude with a taste test of the different varieties of tomatoes.
